

Can't Run a Mac App

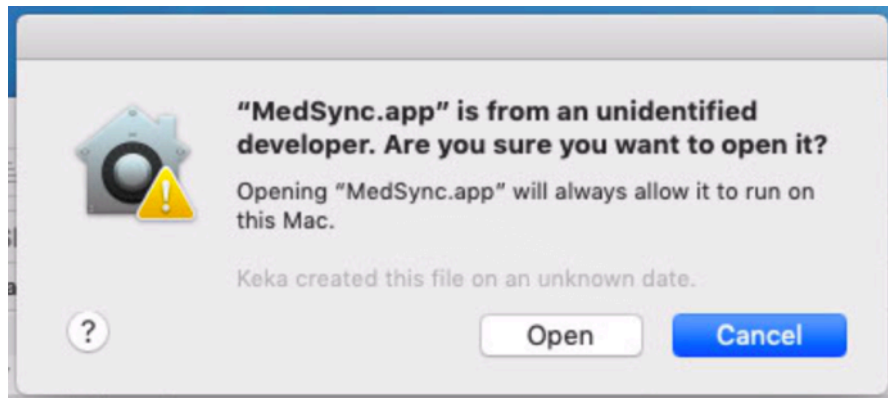

1. Can't open app even though it's known to work OK.

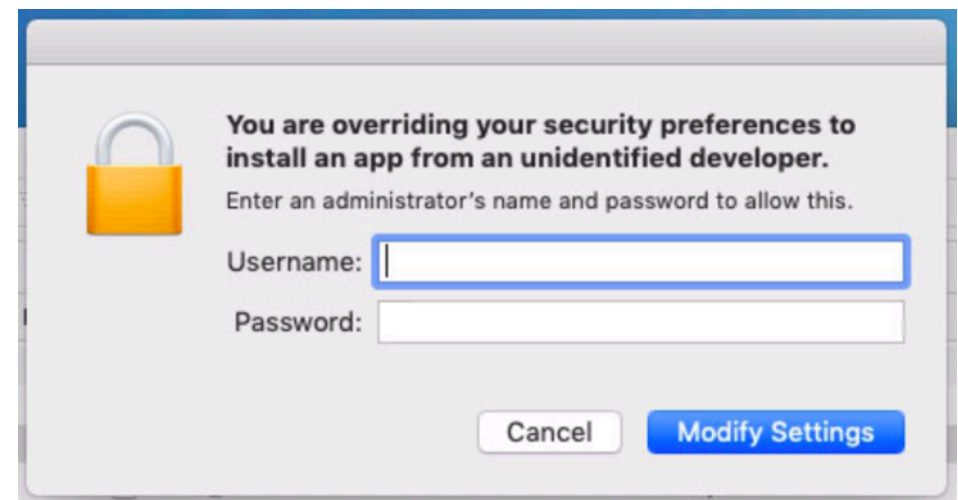

2. Right-click the app to get pop-up menu – select "Open".

3. New dialog appears with an "Open" button – (Left-)click this.

4. Enter admin account credentials and click "Modify Settings".

NOTE: You will need to do the above ONCE – the Mac will remember that you've allowed it to open and run this app.
